New Product Release

# longer wearlife

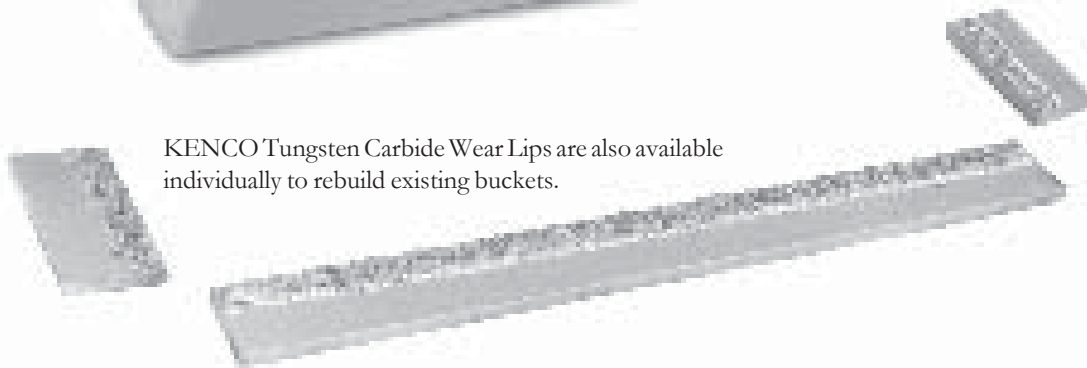

## Elevator Buckets

with Tungsten Carbide Wear Lips

Kenco fabricated steel Elevator Buckets are continuous welded both inside and outside. Center brace and reinforced back available as required.

KENCO Tungsten Carbide Wear Lips are also available individually to rebuild existing buckets.

KENCO fabricated steel Elevator Buckets with Tungsten Carbide Wear Lips provide substantially longer wearlife than standard buckets. With a diamond-like hardness in excess of 90 Rockwell "A", tungsten carbide lips protect bucket edges from premature failure. All KENCO elevator buckets are custom manufactured to exact job requirements.

Especially in hot asphalt elevators, KENCO recommends that buckets be equipped with Tungsten Carbide Clean-Up Lips to ensure the lower elevator area is kept completely clean. KENCO Clean-Up Lips project an extra one-half inch to help prevent material from accumulating and hardening at the bottom of the elevator.

### **Benefits:**

- exclusive tungsten carbide wear lips provide substantially longer wearlife
- fabricated steel buckets are continuous welded both inside and outside
- optional Clean-Up Lips project an extra one-half inch to help eliminate material build-up
- tungsten carbide impregnated wear lips can be installed or replaced in the field
- fewer replacements of worn elevator buckets eliminates unpleasant, tedious labor
- custom manufactured to exact job requirements
