

TCI* Auger Protection

KENCO-LOW COST

longer wearlife TCI* Wear Strips

For Protecting or Rebuilding Foundation Augers

*Tungsten Carbide Impregnated.

Kenco's TCI Wear Strips are one of the most versatile and long lasting repair tools in the arsenal against severe abrasion. With a diamond-like hardness of 90 Rockwell-A, Tungsten Carbide is one of the most abrasion resistant materials ever developed. Kenco crushes this material to a 7-to-20 mesh size and creates a molten puddle of steel where the particles are gravity fed to a depth between 1/4 and 3/8 inch deep, forming a tight matrix of Tungsten Carbide and steel. This material gives you great flexibility during installation. It can be cut to any size and/or bent to almost any radius. It can be used in hot or cold applications (-40 to +1,000 F.) and can withstand thermal shock. It can be installed with any low hydrogen mild steel rod or Mig.

The KWS-12-ATC is 3/8 x 1 x 12 and has a base metal of mild steel.

Versatile enough to bend to nearly any radius. Lengths up to 120"

As easy to weld as a piece of mild steel.

Will outlast any AR steel, Casting, or Hardfacing.

Benefits:

- ◆ Hardness approaching industrial diamond
- ◆ Heat & bend to protect curved areas
- ◆ **Costs less than MOST hardfacing rods**
- ◆ Resists thermal shock
- ◆ Available in nearly any size or shape
